

# GeoAttendance

GeoUnity

# Build Instructions

## Requirements:

- Pocketbase
  - Justification: Multiple authentication methods, easier database management
- NPM

## Instructions (Summarized)

- git clone the project
- Backend: download PocketBase binary, ./run.sh in directory
- Frontend: npm i, npm start

# Live Demo

- Landing Page
- Registration Form
- Login Form
- Contact Us
- About Us
- Check-in Page (work in progress)
- Dashboard Page (work in progress)

# Partner Teams

Week 9: JumpAndLaunch (Successfully built)

- Troubles with platform (Windows)
- .env file addition may need more explanation

# Issues to Address

Can you add a google log-in? (Jump and Launch)

- Yes we can add this later on when the main feature of the project is fully built.
- The Pocketbase platform offers OAuth2 web integration, so we can easily add a google login

Is there a way to "connect" to a class right now? Like how can people connect to their class so that the prof can check their attendance? (Jump and Launch)

- Host will be able to create multiple event groups.
- Each group has a list of registered attendees.
- Each event created can be associated with a group.
- Each event has a list of check-in attendees.
- This way we can connect the events to a class.
