Testing instructions

- Hardware and software are required to have internet connection and browser installed
- Technologies needed: Selenium
- Instructions
 - Follow the instructions here to start frontend and backend servers
 - https://github.com/bencejdanko/GeoAttendance/tree/main/docs/expert_users
 - Before performing any test in Selenium IDE, please remember to navigate to dev/backend-pb and run ./run.sh --clear (double hyphen) to clear the database.
 - Install Selenium IDE extension on your Chrome browser
<https://chromewebstore.google.com/detail/selenium-ide/mooikfahbdckldjindioackbalphokd>
 - Open Selenium IDE on your browser and choose Open an existing project
 - Navigate to dev/frontend/tests and open GeoAttendance.side
 - On Selenium IDE, select Run All Tests.
 - If we want to rerun the tests, please make sure to clear the database beforehand.
- Automated scripts should test our backend interactions

Deployment

- Our deployed site at geoattendance.32kb.dev (please don't run selenium test here, it will not work)

Amount of time to finish the tests

- Read the report below

Coverage of the tests

Feature	Description	Test Case(s)	Expected Result	Expected Time	Actual Test Result
---------	-------------	--------------	-----------------	---------------	--------------------

Landing Page	Landing Page for when the user first accesses the site, explaining the product and why the user would want to use it.	Users can scroll up and down.
